Assignment Code: FSD-O-ASG-03

CSS Basics | **Assignment**

Instructions: Carefully read each question. Use Google Docs, Microsoft Word, or a similar tool to create a document where you type out each question along with its answer. Save the document as a PDF, and then upload it to the LMS. Please do not zip or archive the files before uploading them. Each question carries 20 marks.

Total Marks: 200

Question 1: You are building a landing page for a small bakery in your city. The page looks fine on your laptop but when you open it on your phone, the text is too small and the images go outside the screen. Which CSS technique will you use to fix this and how will you start?

Answer:

Question 2: You added a navbar at the top of your website. The client wants the navbar to always stay visible at the top, even when the user scrolls down. Which CSS property will you use and what value will you set?

Answer:

Question 3: You wrote CSS for a button — first you added a class .btn with blue background, then added an id #submitBtn with red background to the same button. The button is showing red instead of blue. Why is this happening?

Answer:

Question 4: You are building a product card for an online store. You want three cards to sit side by side on desktop, but stack one below the other on mobile. Which layout system will you use and how will you make it responsive?

Answer:

Question 5: You have a section with text and you want to add some space inside the section between the text and the border, and also some space outside the section to separate it from the next section. Which two CSS properties will you use and how will they differ?

Answer:

Question 6: Your senior gives you a design where a 'SALE' label has to sit on the top-right corner of every product image. The label should overlap the image. Which positioning approach will you use?

Answer:

Question 7: What is the difference between display: none and visibility: hidden? Give one situation where you would use each.

Answer:

Question 8: What is the difference between Flexbox and CSS Grid? When should you use each?

Answer:

Question 9: What are the three ways to add CSS to an HTML page? Which one is preferred for real projects and why?

Answer:

Question 10: What is a media query in CSS? Write a small example that changes the background color when the screen is smaller than 600px.

Answer:
